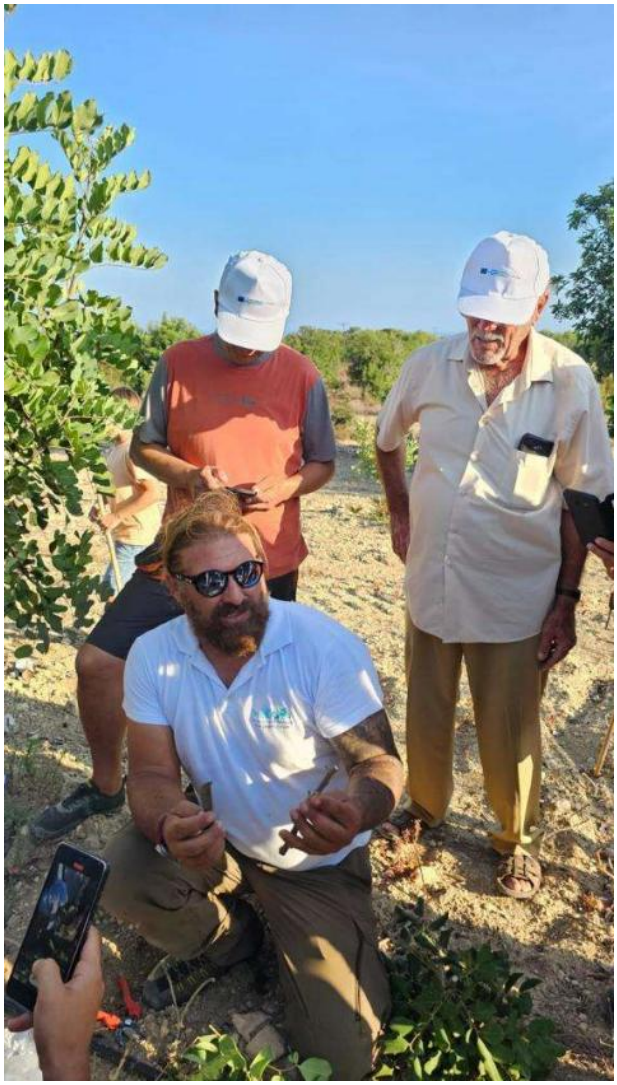
Mentorship and Infrastructure Support for Local Agriculture, Citrus Production, and Small Businesses:

Given the regional importance of agriculture, EUL's Faculty of Agricultural Sciences and Technologies runs a specialized incubator program. Local citrus producers and agricultural startups are provided with free technical mentoring, product development guidance, and direct access to university research fields and laboratories to commercialize innovative, sustainable agricultural products.



EUL provides mentorship, technical guidance, and access to university facilities and infrastructure for local farmers and citrus producers, with these resources open to the general public. The University also offers mentorship and advisory support to local small businesses, helping them improve productivity, adopt sustainable practices, and strengthen their long-term economic viability.
